PROJECT SKYSPIN

AN OPERATIONAL 42 MW WIND PORTFOLIO IN GERMANY WITH REPOWERING POTENTIAL

INFORMATION MEMORANDUM, OCTOBER 2024

This Confidential Information Memorandum (**IM** or **Information Memorandum**) is issued by esmeraPartners GmbH (**esmera**) on behalf of W&W Asset Management / Württembergische Lebensversicherung AG / WL Sustainable Energy GmbH & Co. KG (**W&W** or **Seller**) solely for the use of the recipients (**Recipients** or **Prospective Investor** or **Buyer**) and their advisors on the terms set out below in connection with the proposed transaction as described in this IM (**Transaction**).

The IM has been provided to the Prospective Investor and the fact that the Prospective Investor is participating in the Transaction is confidential and is provided solely on the basis of the confidentiality agreement which the Prospective Investor has already signed and returned to esmera (**Confidentiality Agreement** or **NDA**). The Prospective Investor is therefore bound by the terms of the Confidentiality Agreement in respect of all information contained in this Information Memorandum. If the prospective Investor terminates their participation in the Transaction for any reason, they shall return or destroy all copies of the IM and shall not retain any copies or other records of this text except as expressly permitted in the Confidentiality Agreement.

This IM is the property of esmera and is intended solely to assist the Prospective Investor in making decisions in connection with the Transaction. It does not in any way constitute a legally binding offer to refinance the Target or any of the businesses or assets referred to therein. In particular, esmera and the Seller reserve the right to exclude any recipient at any time, to include other Prospective Investor in the process, to change the timing or scope of the Transaction or to cancel the Transaction altogether without giving any reason. The provision of the IM constitutes a solicitation of offers only and the Seller is under no obligation to accept any indicative or binding offers, regardless of whether the consideration proposed exceeds the consideration offered by any other party.

Although this Information Memorandum has been carefully prepared, esmera, the Seller, the target and/or their respective advisers make no representations or warranties, express or implied, as to the accuracy or completeness of the information contained in this Information Memorandum or as to the accuracy or completeness of the projections contained in this Information Memorandum or as to any other documents or information provided to the Prospective Investor and/or its advisers at any time in connection with the Transaction and none of them accepts any responsibility or liability in relation to such information. The Prospective Investor is advised to seek their own professional advice on the legal, financial, tax and other consequences of the Transaction.

On behalf of W&W Asset Management, esmera would like to thank you for your expressed interest in Project Skyspin. Project Skyspin presents an opportunity to acquire three operational onshore wind projects in Germany with a combined capacity of 42 MW. As all three assets already have a long-lasting operational history, Project Skyspin offers the advantage to invest into assets with substantial on-site yield data and sizable equity stakes due to already fully repaid senior tranches.

Beyond the already existing projects with CODs in the years 2006, 2007 and 2008, the portfolio also offers substantial repowering potential.

Yours sincerely,

Torsten Friedrich, Patrick Siebenrock and Eric Wimmer

All communications or enquiries relating to the Project should be addressed to the following persons:

TRANSACTION SUMMARY AND PROCESS

SALES PROCESS

Background - Opportunity and Information Package

Background

The Seller owns an operating portfolio of 42 MW onshore wind portfolio in Germany organized under three special purpose companies Asendorfer Kippe ASK GmbH & Co. KG, Ganzer GmbH & Co. KG and Windpark Golzow GmbH & Co. KG (each a **Project** or **Target**, collectively the **Portfolio**) which are planned to be sold due to a recalibration of the investment strategy.

On behalf of the Seller, we invite you to further discussions regarding the Sales Process and we kindly ask you to direct all enquiries and communication to esmera.

Opportunity

The Transaction covers the sale of the Targets of which the Seller holds 100% of the shares.

Seller's Information Package

Together with this Information Memorandum the Seller and esmera have compiled further information intended to provide an overview of the Targets (**Information Package**):

- a. This Information Memorandum (**Information Memorandum**)
- b. Commercial information needed for commercial assessment purposes for each individual Project of the Portfolio (**Valuation Framework**)
- c. Financial model, to calculate each Project's cashflow and to derive the DCF based Project value (**Sell Side Model**)

We kindly invite you to submit a non-binding offer (**NBO**) based on this Information Package until **24 October 2024**.

We remind you that the access to the Transaction is governed by the terms of the NDA you have signed with esmera.

NBO REQUIREMENTS

We Look Forward Receiving Your NBO Based on the Information Package

NBO REQUIREMENTS

Your Non-Binding Offer (NBO) should include the following

- 1) The total enterprise value for each Project, you should assume the valuation and commercial take-over date as 01 January 2025 on a cash-free, debt-free basis
- 2) The total repowering value for each Project and any structural or commercial considerations
- 3) Please state the key valuation assumptions you have used to derive the enterprise value and repowering value of each Project, including:
 - Energy yield assumption
 - Any other assumptions that have an impact on your valuation (e.g. OPEX, inflation assumptions, expected Project lifetime, repowering assumptions)
 - Please detail any merchant power price assumptions, e.g. applying a third-party price forecast or own in-house forecast and whether the offer is subject to changes in power price assumptions - please note that offers not subject to change will be preferred by the Seller
- 4) Please set out any other facts, assumptions or expectations that you have included to derive your valuations.
- 5) For the Due Diligence phases, please specify the yield-neutral purchase price adjustments:
 - Price adjustment for +/- 1.0% net wind yield
 - Price adjustment for +/- 10,000 EUR of operation costs p.a. (OPEX)

We invite you to submit your NBO via e-mail to esmera by **24 October 2024**.

Next step

As a next step, we would foresee to form a short-list of preferred bidders and invite those to review and confirm the Transaction with a confirmatory NBO (**cnBO**) based on certain key valuation drivers incl. wind yield reports and a review certain key items for each of the assets. It's envisaged to arrange management meetings and calls as needed.

THE PORTFOLIO

REPOWERING UPSIDE

REPOWERING ANALYSIS

Asendorfer Kippe

Repowering Analysis - ASK

renerco has conducted a repowering analysis of the wind park ASK based on various restrictions as explained below.

renerco has found that the wind park ASK could be repowered with three new wind turbines of the type Nordex N175-6.8 with a hub height of 179m and a total height of 266.5m. Therefore, the repowering would result in a capacity of 20.4 MW, more than three times the current capacity of 6.0 MW.

In its analysis, renerco has incorporated a considerable set of restrictions. These include required minimum distances to settlements and buildings, roads and nature reserves. Furthermore, renerco has also reviewed the impact of the new turbines on civil aviation, military night low flying systems, air defence radar and archaeology but has not found any effect.

renerco has estimated that the new net power production (P50) after repowering could be 57,169.9 MWh p.a. over a 20-year period, more than four times more than the expected power production for the existing wind park:

OBSERVATION PERIOD	20 YEARS
Uncertainty	14%
Standard deviation (MWh)	7,978.8
Yield P50 (MWh p.a)	57,169.9
Yield P75 (MWh p.a)	51,788.3
Yield P90 (MWh p.a)	46,944.6

Graphical representation of renerco's restriction analysis. It shows the old turbines with a blue dot, the new turbines after repowering with a red dot and renerco's various restrictions for this analysis.

REPOWERING ANALYSIS
Ganzer

Repowering Analysis - Ganzer

renerco has conducted a repowering analysis of the wind park Ganzer based on various restrictions as explained below.

renerco has found that the wind park Ganzer could be repowered with four new wind turbines of the type Nordex N175-6.8 with a hub height of 179m and a total height of 266.5m. Therefore, the repowering would result in a capacity of 27.2 MW, almost three times the current capacity of 10.0 MW.

In its analysis, renerco has incorporated a considerable set of restrictions. These include required minimum distances to settlements and buildings, roads and nature reserves. Furthermore, renerco has also reviewed the impact of the new turbines on civil aviation, military night low flying systems, air defence radar and seismology but has not found any effect.

The only minor issue renerco has found is that an amendment to the current development plan is likely necessary as e.g. it currently only allows for smaller wind turbines up to a height of 142m (top edge) above the height of the railing.

renerco has estimated that the new net power production (P50) after repowering could be 78,132.0 MWh p.a. over a 20-year period, almost four times more than the expected power production for the existing wind park:

OBSERVATION PERIOD	20 YEARS
Uncertainty	14%
Standard deviation (MWh)	10,963.7
Yield P50 (MWh p.a)	78,132.0
Yield P75 (MWh p.a)	70,737.1
Yield P90 (MWh p.a)	64,081.5

Graphical representation of renerco’s restriction analysis. It shows the old turbines with a blue dot, the new turbines after repowering with a red dot and renerco’s various restrictions for this analysis.

REPOWERING ANALYSIS

Golzow

Repowering Analysis - Golzow

renerco has conducted a repowering analysis of the wind park ASK based on various restrictions as explained below.

renerco has found that the wind park Golzow could be repowered with 13 new wind turbines of the type Nordex N175-6.8 with a hub height of 179m and a total height of 266.5m. Therefore, the repowering would result in a capacity of 88.4 MW, more than three times the current capacity of 26.0 MW.

In its analysis, renerco has incorporated a considerable set of restrictions. These include required minimum distances to settlements and buildings, roads and nature reserves. Furthermore, renerco has also reviewed the impact of the new turbines on civil aviation, air defence radar and archaeology but has not found any effect.

The only minor issues renerco found were that an amendment to the development plan is likely necessary due to e.g. too high wind turbines and that the turbines are in the military low flight system which require a review for heights above 213m.

renerco has estimated that the new net power production (P50) after repowering could be 207,574.3 MWh p.a. over a 20-year period, almost five times more than the expected power production for the existing wind park:

OBSERVATION PERIOD	20 YEARS
Uncertainty	15.4%
Standard deviation (MWh)	31,889.2
Yield P50 (MWh p.a)	207,574.3
Yield P75 (MWh p.a)	186,065.4
Yield P90 (MWh p.a)	166,706.6

Graphical representation of renerco's restriction analysis. It shows the old turbines with a blue dot, the new turbines after repowering with a red dot and renerco's various restrictions for this analysis.

THE SELLER

W&W WÜSTENROT & WÜRTTEMBERGISCHE AG

Overview and Introduction to W&A Asset Management

W&W Asset Management GmbH is a subsidiary of the Wüstenrot & Württembergische Group (**W&W**) and is responsible for asset management within the Group. Its main task is the management and profitable investment of the capital of the W&W Group, in particular of the insurance companies. The team of W&W Asset Management will handle the Transaction on behalf the Seller.

W&W Asset Management GmbH focuses on a long-term and sustainable investment strategy in order to generate stable returns. Its activities cover a wide range of asset classes such as equities, bonds, real estate and alternative investments. Risk management also plays a key role in safeguarding the assets of clients and the Group.

In addition to managing the capital of the W&W Group insurance companies, W&W Asset Management GmbH also offers different services to their Group internal institutional investors.

Main Business Areas:

Central Service Areas:

W&W Asset Management GmbH

AS OF 31 DECEMBER 2023, W&W ASSET MANAGEMENT HAS IN TOTAL 35.3 BN EUR ASSETS UNDER MANAGEMENT

- HIGH LEVEL OF EXPERTISE IN ALL LISTED ASSET CLASSES
- SIGNIFICANT VOLUMES IN ALL SEGMENTS
- INSTITUTIONAL FOCUS OF ASSET MANAGEMENT
- CLOSE INTEGRATION OF THE INDIVIDUAL SPECIALISED DEPARTMENTS
- INSTITUTIONAL FOCUS ALSO DELIVERS ADDED VALUE FOR MUTUAL FUND RANGE
